ENERGY INNOVATIONS CHOOSES UNDERWRITERS LABORATORIES FOR SUNFLOWER UL AND IEC TESTING

Energy Innovations, Inc., manufacturer of high concentration solar modules and systems, announced today that it has chosen Underwriters Laboratories to perform its Sunflower certification testing to UL and IEC standards.

Energy Innovations achieved UL listing on its previous generation Sunflower highly concentrated PV system. Sunflower remains the only CPV system to achieve UL listing.

“Energy Innovations has a rich history with Underwriters Laboratories during the early stages of Concentrated Solar standards development,” said Joe Budano, Energy Innovations’ CEO. “With our Sunflower product listing, we learned many valuable lessons about product reliability and safety that have been designed into the current generation of Sunflower products. We anticipate a quick process to achieve certification.”

Energy Innovations continues to participate in shaping the much needed industry standards for CPV. The company currently sits on the IEC Technical Committee TC82 Working Group 7 tasked with refining the IEC 62108 standard and continues to work with Underwriters Laboratories as they evolve the UL 8703 standard.
